DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-12 are rejected under 35 U.S.C. 102(b) as being anticipated by Patacsil et al. (US Patent No 6,132,379). Patacsil discloses a dual mode handheld ultrasonic device provided for guiding a venous access catheter into a patient's peripheral vein (see Abstract). A fixed high frequency B-mode imaging system is used to create a real-time display of a superficial blood vessel's cross-section (column 3, lines 15-43). See Objects and Advantages, numbers 2, 4, and 6 (columns 3-4). Discussion of pulse generation and receiving can be found at column 6, lines 50-67. Column 7, lines 5-6 and lines 55-65 discusses the use of an LCD screen for display purposes. Also, LEDs are located on the scanhead housing adjacent to the patient's appendage and blood vessel (column 8, lines 36-65). A rubber strap may be wrapped around the patient's arm to secure the device for hands-free single user operation (column 9, lines 9-13).
